

Registration of plant protection products in Poland is a challenge

Checking up the potential

Average time of registration is circa 3 years,
so we do not go as fast as we could

Checking up the stage

January 2009 : 800 applications pending

Symptoms

- Two registration systems used at the same time

The diagnosis

- Lack of clear procedures
- Lack of transparent structure

Antidotum

- Preparation of procedures for every step of process
- Preparation of **farmers oriented** regulations

How the antidote acts ?

By September 2009 circa 70 % cases
were evaluated

Expected results

It is difficult to reach the target , but but we trust, that queuing applications are going to be solved till the end 2009

Additional area of creative work

- Package of Anticounterfeit Law
- Minor Use – Off Label use system
- Co-ordination Sustainable use Directive with Registration system

Preparations for future

There is a chance
to set zonal
registration system.

Do not create
hermetic
national way
of authorization
