MINISTRY OF  
AGRICULTURE

# Neonicotinoids

The European Commission restricted the use of three neonicotinoids on 24 May 2013 based on the regulation 485/2013/EU.

3 neonicotinoid active substances:

- thiamethoxam (Syngenta)
  - clothianidin (Bayer)
  - imidacloprid (Syngenta)
- 
- + fipronil /phenylpyrazole/ (not a neonicotinoid)

MINISTRY OF  
AGRICULTURE

---

# Main reasons for the restriction

Increased bee mortality in the EU:

- bee disease?
- climate change?
- plant protection products (PPPs) and their residues (neonicotinoids, fipronil)?
- and unknown factors?

EFSA scientific opinion: These neonicotinoids and fipronil pose risk to the bees under certain exposure routes.

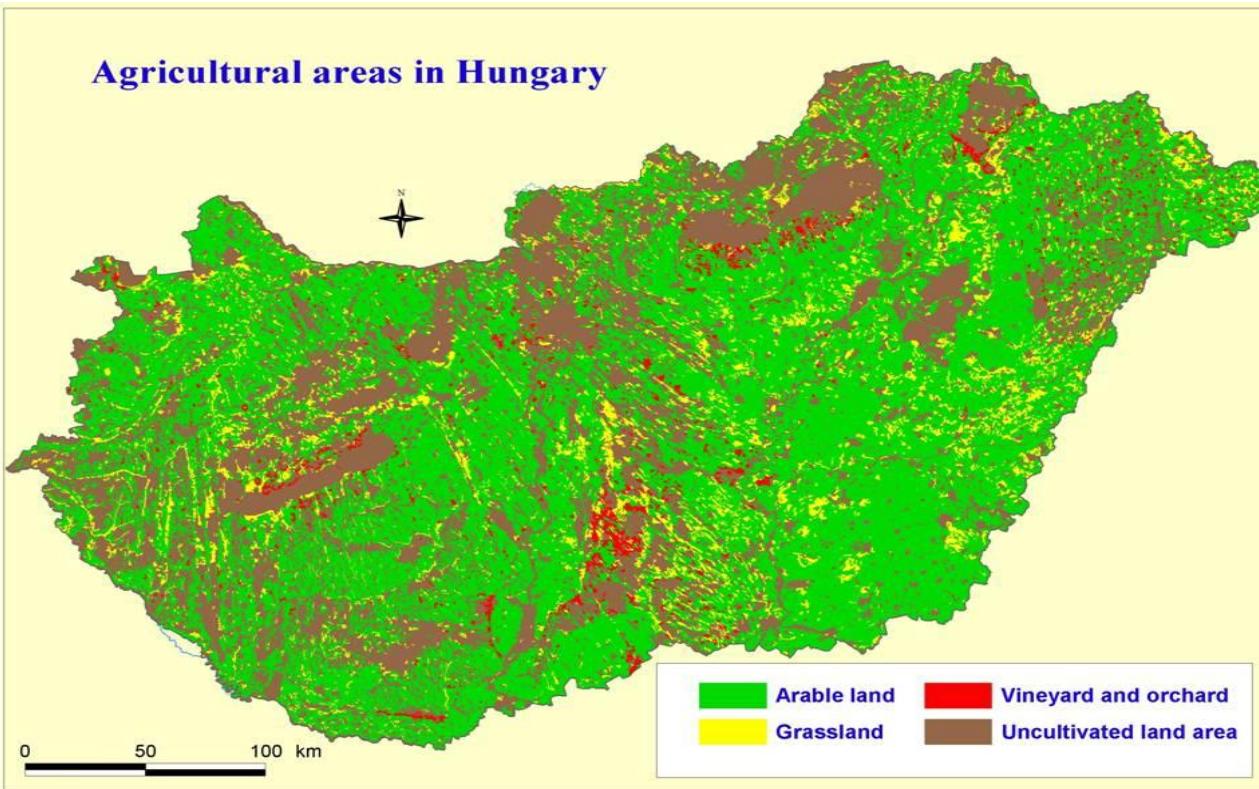

- dust drift while sowing
- translocation of pesticide active substances (pollen, nectar, guttation)

Further decision on neonicotinoids by the EU is expected in the beginning of 2016.

MINISTRY OF  
AGRICULTURE

**Total area: 9.3 million ha**

**Productive land: 7.3 million ha**

**Utilised Agricultural Area: 5.3 million ha**

**Arable land: 4.3 million ha**

MINISTRY OF  
AGRICULTURE

## Arable land: 4.3 million ha

Crops attractive to/visited by bees:

- maize: 1.16 million ha
- sunflower: 0.63 million ha
- oil seed rape: 0.23 million ha

MINISTRY OF  
AGRICULTURE

---

# Main restrictions in use of the 3 neonicotinoids

## Restrictions in crops attractive to/visited by bees:

- banned seed dressing
- banned soil treatment
- foliar application only after flowering of crops attractive to bees

## Only with expert use: (in Hungary) category I, II of PPPs

## Greenhouse use:

- allowed up to 5 days before flowering, and after
- not permitted during flowering

MINISTRY OF  
AGRICULTURE

## Dust drift

In 2010 restrictions in the provisions concerning the authorisation documents →

- Use of deflector on pneumatic planters channels dust to the soil surface
- Sowing in strong winds banned
- Stronger glue use by the producer

AIM: to minimise dust drift

MINISTRY OF  
AGRICULTURE

## Difficulties of restrictions

1. *Diabrotica virgifera virgifera* LeConte (WCR):

- first detection in Mórahalom, Hungary (1995)
- high infestations
- large grain/silage and seed maize area  
    ~1.1-1.2 million ha
- neonicotinoids provided good protection level against WCR

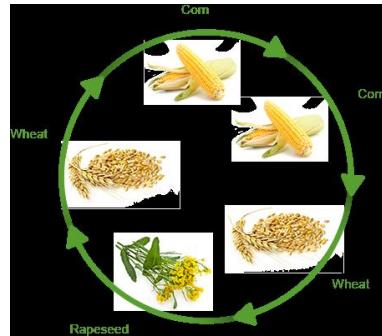

MINISTRY OF  
AGRICULTURE

# Control options in maize

## crop rotation

## soil treatment

## foliar application

Under development:  
orientation/mating disruption, biocontrol products

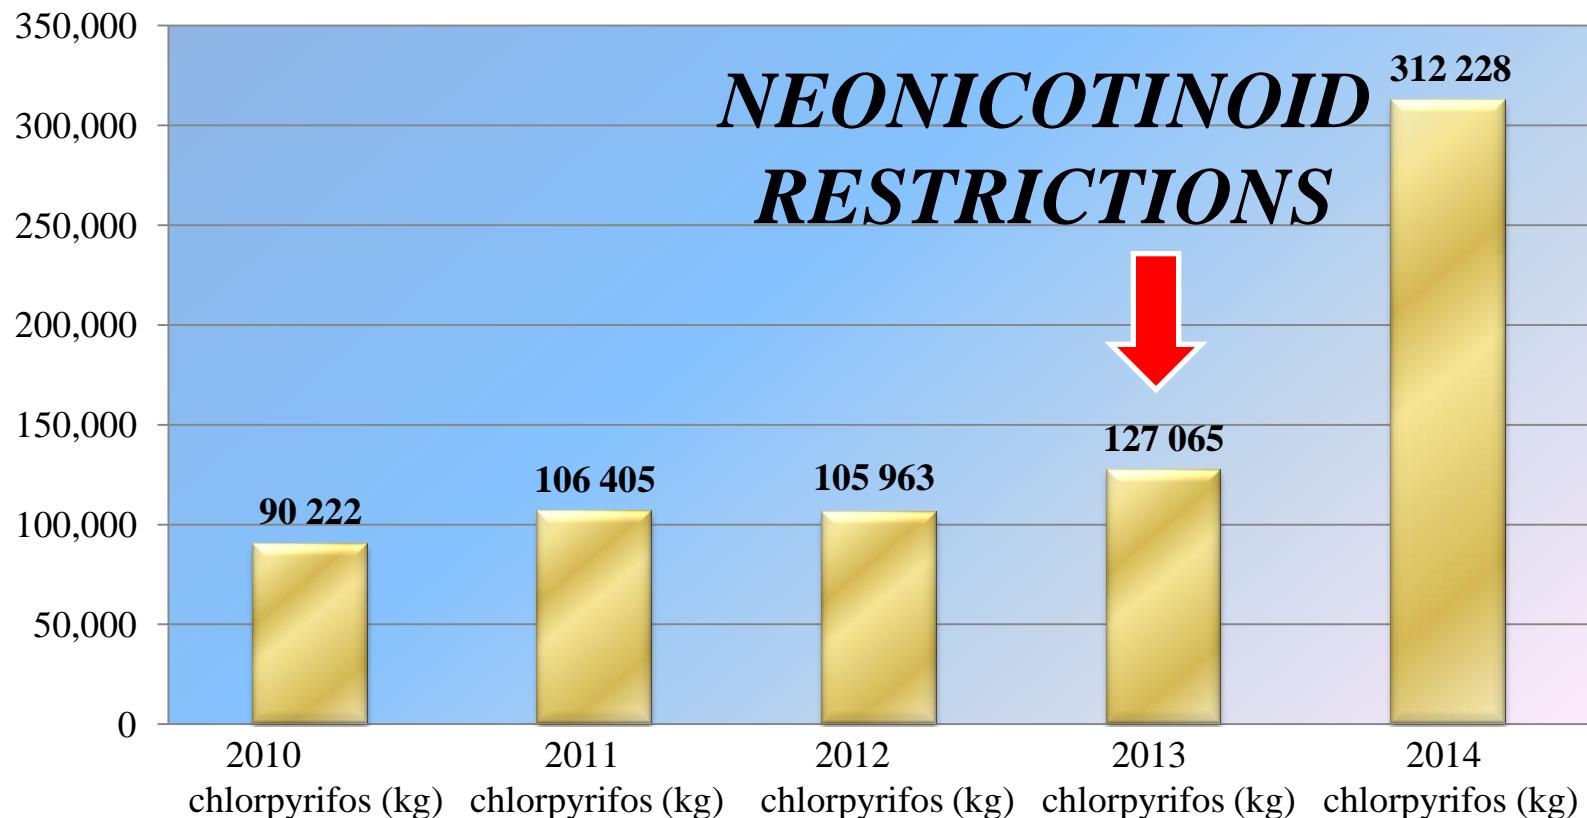

## Difficulties of restrictions

2. Other control options in maize, sunflower and oil seed rape (OSR) are often less effective and/or more expensive or not marketed yet
  
3. The chlorpyrifos and other PPPs used for foliar application pose higher environmental risk than neonicotinoids.

MINISTRY OF  
AGRICULTURE

## Use of chlorpyrifos in Hungary

Quantities of chlorpyrifos in plant protection products between 2010-2014

2013.	18 500

# Importance of beekeeping

- 18 - 19000 beekeepers – livelihood
- 18 - 24000 tons of honey
- In Hungary – 12 bee colonies /km<sup>2</sup>

MINISTRY OF  
AGRICULTURE

## Bee poisoning incidents 2015

**33 bee poisoning incidents were reported**

- 54 bee samples and
- 149 plant samples were collected.

**In 12 out of 54 bee samples (8 bee poisoning incidents)  
insecticide residue was detected**

Active substances in the bee samples: chlorpyrifos, chlorpyrifos-methyl, thiacloprid, cypermethrin, dimethoate, tau-fluvalinate, piperonyl butoxide

MINISTRY OF  
AGRICULTURE

# Bee poisoning incidents 2015

149 plant samples  
7 sample's residues hazardous to bees

Crop	Active substances
undergrowth - <i>Lamium purpureum</i>	thiamethoxam
OSR	cypermethrin, chlorpyrifos
oil radish	imidacloprid
flowering weeds in pear tree plantation	thiamethoxam
flowering weeds	thiamethoxam
maize	thiamethoxam
sunflower	dimethoate, omethoate

MINISTRY OF  
AGRICULTURE

## Hungarian Chamber of Professionals and Doctors of Plant Protection

- Over 3000 Plant Protection Experts
- Unique organization in the EU
- 19 county organizations in Hungary

### Main tasks:

- Professional advice and consultation with farmers
- Education/training for farmers
- Operation of the Plant Protection Forecasting Network
- Experts involved in official survey and monitoring program against quarantine pests
- Management and control of *Ambrosia artemisiifolia*

MINISTRY OF  
AGRICULTURE

---

## Future considerations for the Hungarian plant protection

- Sustainable use of plant protection products is very important
- Professional, reasonable and environmentally friendly plant protection in Hungary
- We fulfill the restrictions: we have not granted any emergency authorisations for neonicotinoids till now but there is a high pressure from the farmers
- We still have reservations about the restrictions
- Farmers are facing with difficulties

MINISTRY OF  
AGRICULTURE
